OBJECTIVE

Full Stack Software Engineer with 3+ years of professional experience building scalable web applications and backend systems. Proficient in JavaScript, C#, and modern frameworks across the stack. Seeking to contribute to high-impact teams driving product performance, architectural improvements, and user-focused innovation.

EDUCATION

Bachelor of Computer Science, Oregon State University

In Progress

SKILLS

Languages	C#, JavaScript, TypeScript, SQL
Frameworks	.NET Core, Entity Framework, Vue.js, Tailwind CSS
Tools	Azure DevOps, FFmpeg, Git
Database	PostgreSQL, SQL Server
Other	REST API Design, CI/CD, Docker, Software Architecture

EXPERIENCE

Full Stack Software Engineer

2022 - Present

MemoryShare

Dallas, TX

- Rewrote the core video rendering engine using C# and FFmpeg, reducing render time from 20+ minutes to under 2 minutes. Restructured architecture to offload archive generation and HLS streaming to background tasks, improving scalability and responsiveness.
- Built full-stack features including QR-based access, rendering pipelines, and email-based edit invites, enhancing both customer experience and internal tooling efficiency.
- Implemented perceptual photo hashing to detect duplicates and near-duplicates on upload, reducing manual curation time by over 50% for large albums.
- Integrated HLS streaming to replace MP4 downloads, cutting active storage by 60% and reducing playback-related support tickets by 90%.

Instructor Assistant

2022

PDX Code Guild

Portland, OR

- Mentored developers in group/1:1 learning environments to support bootcamp curriculum and advanced project work.
- Reviewed student pull requests and guided bug resolution efforts.

PROJECTS

Callsign Developed a VS Code extension for exploring and testing OpenAPI specifications with an integrated HTTP client. Features include spec visualization, request building, and response inspection.
